Self-Taught developer experience with converting designs into responsive and interactive user experiences with HTML, CSS, JavaScript, and React. I have an eagerness for self-learning and crave to improve my skills to continue to grow as a developer.

PROJECTS

Todo List App — *HTML/CSS/JS/REACT*

A remake from a previous project, the original was a simple vanilla JS Todo App which is now refactored to a React App where the user can add a new task item to a list, edit the details of an existing task, mark a task as completed, and delete a task if the user no longer needs it. Continued development will include localStorage where users can save their task from their previous session.

Tenzie Game App — *HTML/CSS/JS/REACT*

Simple game of Tenzie. The user is displayed with 10 dice and all dice must have the same number value for the user to win. Some extra features added include a starting page so that the game starts when the user is ready, keeping track of the amount of clicks until a win, tracking time passed until a win, displaying an image of dice instead of a number value, displaying a leader board of sorted scores, and saving past scores in local storage.

Memory Game App — *HTML/CSS/JS*

A simple vanilla JS Memory game where the user is presented with boxes hiding an image. The user must click and find the matching pair images until all pairs are found. App features a score tracker that gives the user 1 point when a pair is found. When the user completes the game the user is presented with a congratulation message.
